

SaltDNA Key Features

SaltDNA is a secure mobile communications system that protects client confidentiality and drives productivity.

Accountability and Compliance

Complete, centralized control over which communications are archived for accountability and regulatory compliance.

Centralized Management

Ability to provision and de-provision virtually instantaneously, from anywhere in the world.

Secure Collaboration

Conference calling and group messaging allow the enterprise team to collaborate on confidential matters securely.

Closed Contacts

Authorized contacts are part of a closed group within the SaltDNA app and aren't linked to the device's personal contacts.

Secure File Transfer

Access confidential legal documents on the move.

Encrypted Voice and Text

All communications, on mobile devices and from the desktop, are secure and private.

Reports & Analytics

Ability to monitor communication usage including individual data.

Deployment Options

Available as a hosted service or as an on-premise installation within private infrastructure.
